INT. J. CONTROL, 1998, VOL. 71, NO. 6, 1133–1136

SUBJECT INDEX (Vol. 71)

Adaptive dynamic surface control, simplified algorithm for adaptive backstepping control of nonlinear systems, 959
Adaptive stabilization of delay differential systems with unknown uncertainty bounds, 259
Aeroengine compressor models, multi-mode Moore–Greitzer type, dynamics and control of entrained solutions, 807
Algorithm
  (decentralized) minimal control synthesis type, for minimal phase plant dynamics of unknown order but known relative degree, robustness, 1
  for adaptive backstepping control of nonlinear systems, adaptive dynamic surface control, 959
  for neural network based predictive controller design for nonlinear control systems, 1119
  two-level, matrix pencil equivalents of general 2-D polynomial matrix, 1027
Algorithms, successive Galerkin approximation type, for nonlinear optimal and robust control, 717
Anaesthesia, muscle-relaxant type, nonlinear generalized predictive control, 239

Backstepping control, adaptive, of nonlinear systems, simplified algorithm, dynamic surface control, 959

Canonical form, general, for feedback passivity of nonlinear systems, 891
Chain scattering approach to H^∞ control for time-varying systems, 195
Chemical reactor, flatness-based control of nonlinear delay systems, 871
Closed-loop
  cancellations in $\mathcal{H}_\infty$ control of time-varying systems, 163
  norm bounding solution to discrete linear time-varying fixed finite horizon control problem, 359
Compensator
  based output feedback sliding mode controller design, 601
  synthesis for tracking applications in discrete-time system form time-domain perspective, 437
Compressor models, multi-mode Moore–Greitzer type, dynamics and control of entrained solutions, 807
Continuous-time affine nonlinear system, receding-horizon control problem, 19
Control
  discrete generalized H_2 type, LQR weight selection approach, 93
  H^∞ type, for time-varying systems, chain scattering approach, 195
  H_∞ type, robust, in presence of stochastic uncertainty, 219
  $\mathcal{H}_\infty$ type, of time-varying systems, closed-loop cancellations, 163
  laws, approximate nonlinear receding-horizon type in closed form, 19
  nonlinear generalized predictive type, applied to muscle-relaxant anaesthesia, 239
  nonlinear H_∞ type, related problems of homogeneous systems, 79
  nonlinear optimal and robust, successive Galerkin approximation algorithms, 717
  of chemical reactor, flatness-based control of nonlinear delay systems, 871
  of entrained solutions in multi-mode Moore–Greitzer compressor models, 807
  of flat systems by quasi-static feedback of generalized states, 745
  of nonlinear uncertain systems, simplified algorithm for adaptive dynamic backstepping surface control, 959
  optimal, an invariant second variation, 689
  optimal, of distributed hyperbolic system with multiple time-varying lags, 419
  predictive, for nonlinear systems using neural networks, 1119
  problem, discrete norm bounded linear time-varying type, on finite horizon, 359
  sliding, inversion based, of flexible manipulator, 477
  subsystems, nonlinear, affine, in cascade connection, modelling, 459
Controller
  compensator based output feedback sliding mode type, design, 601
  generalized minimum variance type, improved dual version, 131
  mixed-norm H_2/L_1 type, synthesis via fixed-order dynamic compensation, Riccati equation approach, 35
Controllers, deadbeat, ripple-free, optimal, 1087
Coordinate basis of linear time-invariant systems, 981

Deadbeat controllers, optimal, ripple-free, 1087
Delay systems
  differential, with unknown uncertainity bounds, adaptive stabilization, 259
  nonlinear, flatness-based control, chemical reactor, 871
Descriptor system with time-varying uncertainty, robust $\mathcal{H}^2$ control, 559

Design
backstepping type, for multi-input control of class of uncertian nonlinear systems with second-order sliding modes, 767
for general H_∞ almost disturbance decoupling problem with measurement feedback and internal stability, an eigenstructure assignment approach, 653
of compensator based output feedback sliding mode controller, 601
of observer for special class of nonlinear systems, 405
tools for the exponential stabilization of systems with drift, time-varying homogeneous feedback, 837
Diffusion process, 2-D, LQG homing problem solution via a different uncontrolled process, 1021
Discrete generalized H_2 control problem, LQR weight selection approach, 93
Discrete norm bounded linear time-varying control problem on the finite horizon, 359
Discrete-time
nonlinear systems, forwarding, family of bounded globally asymptotically stabilizing feedbacks, 823
systems, (J, J')-lossless factorization, 517
Distributed hyperbolic system with multiple time-varying lags, optimal control, 419
Drifting systems, design tools for exponential stabilization, time-varying homogeneous feedback, 837
Dual version, improved, of the generalized minimum variance controller, 131
Dynamic programming equations for optimal control problems, multi-time variant of Riccati equation, 61
Dynamics and control of entrained solutions in multi-mode Moore–Greitzer compressor models, 807

Estimation of input disturbance for state-space system using noisy observations, 505
Estimators, maximum likelihood type, for nonlinear dynamical system models, comparative study, 391

Factorization
inner–outer type, for non-square proper functions with infinite and finite $j\omega$-axis zeros, 145
(J, J')-lossless type, for discrete-time systems, 517
Feedback
passivity, of nonlinear systems, general canonical form, 891
quasi-static, of generalized states, control of flat systems, 745
time-varying, homogeneous, design tools for the exponential stabilization of systems with drift, 837
Feedbacks, bounded globally asymptotically stabilizing family, for forwarding in discrete-time nonlinear systems, 823
Flatness-based control of nonlinear delay systems, chemical reactor, 871
Flat systems, control by quasi-static feedback of generalized states, 745
Function, non-square, proper, with infinite and finite $j\omega$-axis zeros, inner–outer factorization, 145

Generalized states, quasi-static feedback, for control of flat systems, 745

H_2/L_1 controller, mixed-norm type, synthesis via fixed-order dynamic compensation, Riccati equation approach, 35
H^∞ control, for time-varying systems, chain scattering approach, 195
H_∞
almost disturbance decoupling problem, general, with measurement feedback and internal stability, eigenstructure assignment approach to design, 653
control, robust, in presence of stochastic uncertainty, 219
$\mathcal{H}^2$ control, robust, of descriptor system with time-varying uncertainty, 559
$\mathcal{H}_\infty$ control of time-varying systems, closed-loop cancellations, 163
Hardy space approach to the analysis of spectral factors, 277
Hereditary systems, anisochronic state observers, 581
Homogeneous systems, problems related to nonlinear H_∞ control, 79
Hyperbolic distributed system with multiple time-varying lags, optimal control, 419

Impulse-free output regulation of singular nonlinear systems, 789
Input disturbance estimation in the bounded noise context, 505

(J, J')-lossless factorization for discrete-time systems, 517

Lags, time-varying, multiple, in distributed hyperbolic system, optimal control, 419
Linear
2-D systems transformation, generalization of a theorem of Rosenbrock, 491
time-invariant systems, coordinate basis, 981
LQG homing problem solution via a different uncontrolled process, 1021
LQR weight selection approach to discrete generalized H_2 control problem, 93

Manipulator, flexible-link type, inversion-based sliding control, 477
Manipulators, mechanical, global minimum-time trajectory planning using interval analysis, 631
Matrix
norms, structured, for robust stability and performance with block-structured uncertainty, 535
pencil equivalents of general 2-D polynomial matrix, 1027

Minimal phase plant of unknown order but known relative degree, minimal control synthesis algorithm robustness, 1
Modelling study and servo-control of air motor systems, 459
Models
for nonlinear dynamical systems, maximum likelihood estimators, comparative study, 391
Moore–Greitzer type, multi-mode, for compressors, dynamics and control of entrained solutions, 807
Multi-input backstepping design with second-order sliding modes for a class of uncertain nonlinear systems, 767
Multi-mode Moore–Greitzer compressor models, dynamcics and control of entrained solutions, 807
Multi-time dynamic programming and Riccati equations, 61
Multivariable
spectral factorization problem, Hardy space approach, 277
systems, time-domain performance in response to fixed inputs, 437

Neural network based predictive controller design algorithm, for nonlinear control systems, 1119
Nonlinear
control systems, neural network based predictive controller design algorithm, 1119
delay systems, flatness-based control, chemical reactor, 871
discrete-time systems, forwarding, family of bounded globally asymptotically stabilizing feedbacks, 823
dynamical system models, comparative study of maximum likelihood estimators, 391
generalized predictive control applied to muscle relaxant anaesthesia, 239
H_∞ control, related problems of homogeneous systems, 79
optimal and robust control, successive Galerkin approximation algorithms, 717
singular systems, impulse-free output regulation, 789
systems, feedback passivity, general canonical form, 891
systems satisfying certain regularity conditions, observer design, 405

Obituary, Yakov Zalmanovich Tsypkin, 191
Observer design for a special class of nonlinear systems, 405
Observers
of state, anisochronic, for hereditary systems, 581
sliding mode type, via equivalent control approach, 1051
Optimal control
an invariant second variation, 689
of distributed hyperbolic system with multiple time-varying lags, 419
Optimal ripple-free deadbeat controllers, 1087
Output
regulation, impulse-free, of singular nonlinear systems, 789
zeroing problem for general polynomial matrix descriptions, 1069

Pendulum, n-link, open-loop oscillatory stabilization, 931
Pole/zero cancellations in time-varying systems, 103
Polynomial matrix descriptions, general, output zeroing problem, 1069
Predictive control for nonlinear systems, using neural networks, 1119

Quadratic boundedness of nominally linear systems, 1105

Regulation, of output, impulse-free, for singular nonlinear systems, 789
Riccati equation, multi-time variant, resulting from new dynamic programming equations for optimal control problems, 61
Robust
H_∞ control in presence of stochastic uncertainty, 219
$\mathcal{H}^2$ control of descriptor system with time-varying uncertainty, 559
Robustness of the minimal control synthesis algorithm with minimal phase plant dynamics of unknown order but known relative degree, 1
Rosenbrock theorem generalization and a transformation for 2-D linear systems, 491

Sampling, of signal, non-uniform, periodic, reconstruction of a finite sum of sinusoids, 615
Servo-control of air motor systems, modelling study, 459
Signal reconstruction, of a finite sum of sinusoids from non-uniform periodic samples, 615
Singular nonlinear systems, impulse-free output regulation, 789
Singularly perturbed stochastic hybrid systems, composite stabilization, 1005
Sliding
control, inversion-based, of flexible-link manipulator, 477
mode observers via equivalent control approach, 1051
modes, second-order, for class of uncertain nonlinear systems, multi-input backstepping design, 767
Spacecraft, axisymmetric, subject to unknown but bounded disturbance torques, quadratic boundedness of nominally linear systems, 1105
Spectral factor analysis, Hardy space approach, 277
Stability, stochastic input-to-state type, global feedback stabilization, 907
Stabilization
adaptive, of delay differential systems with unknown uncertainty bounds, 259
composite, of singularly perturbed stochastic hybrid systems, 1005

exponential, of systems with drift, design tools, time-varying homogeneous feedback, 837
open-loop, oscillatory, of an n-pendulum, 931
State observers, anisochronic, for hereditary systems, 581
Stochastic
hybrid systems, singularly perturbed, composite stabilization, 1005
input-to-state stability, global feedback stabilization, 907
Stochastically uncertain linear systems, robust H_∞ state feedback control, 219
System equivalence, zero coprime type, transformation for 2-D linear systems, generalization of a theorem of Rosenbrock, 491

Time-domain performance of multivariable systems in response to fixed inputs, 437
Time-invariant linear systems, coordinate basis, 981
Time-varying
homogeneous feedback, design tools for the exponential stabilization of systems with drift, 837
systems, H^∞ control, chain scattering approach, 195
systems, $\mathcal{H}_\infty$ control, closed-loop cancellations, 163
systems, pole/zero cancellations, 103
Trajectory planning, minimum-time, global, of mechanical manipulators, using interval analysis, 631
Transformation for 2-D linear systems and a generalization of a theorem of Rosenbrock, 491
Two-dimensional linear systems transformation, generalization of a theorem of Rosenbrock, 491

Uncertain linear systems with stochastic uncertainty, robust H_∞ state feedback control, 219
Uncertainty, block-structured, structured matrix norms for robust stability and performance, 535
